

MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

AUGUST 1935

TEMPERATURE

The mean temperature for August was generally above normal in Canada and Newfoundland from the Atlantic coast to eastern Manitoba and the territories immediately west of Hudson Bay. In the Yukon and Mackenzie River valleys, in central and eastern British Columbia, in Alberta, Saskatchewan, the western part of Manitoba, as well as locally on the Laurentian plateau in Quebec, the mean temperatures were below the normal August temperature.

In British Columbia the mean temperature was one to three degrees below normal in all districts except along the northern section of the coast, the southeastern tip of Vancouver Island and the lower mainland, where the temperature was normal to two degrees above.

Mean temperatures in Alberta were normal to three degrees below normal except in the foothill district west of Edmonton, in the extreme southwest corner of the province and the eastern portion of the district between the Red Deer and North Saskatchewan Rivers, where normal to two degrees in excess were reported. There were local frosts on the 16th and 17th with minima of 30 degrees reported from several points and 24 degrees to 29 degrees from a few points.

In Saskatchewan, in the region between the North and South Saskatchewan Rivers, as far east as Saskatoon, mean temperatures for August were normal to one degree above. Elsewhere in the grain regions of Saskatchewan there were deficiencies of one to three degrees, except locally in the Wood Mountain region. In the far north beyond Prince Albert, temperatures were above normal. There were local frosts on the 26th, 27th, 29th, 30th, and 31st.

The mean temperatures were normal to two degrees below normal over the grain region of Manitoba, except in the Red River valley and the Dauphin district where there were excesses of one to two degrees. In the lake region and the far north temperatures varied from one degree below to one degree above normal. Local frosts occurred in southern Manitoba on the 30th and 31st.

In Ontario there were excesses of one degree to five degrees. The largest excesses (of four or five degrees) occurred near Lake of the Woods along the head waters of the Moose River and southern Algoma, the Georgian Bay counties and locally in the peninsular counties.

Along the St. Lawrence River to the Gulf and in the Lake St. John region the mean temperatures were mostly three to five degrees above normal but there were excesses of six degrees or more locally in the Lake St. John and Gaspé regions. In the upper Chaudière valley and in the upper Gatineau valley temperatures were normal or locally deficient.

In the Atlantic provinces the mean temperatures were above the average by two to five degrees in New Brunswick and two to four degrees in Prince Edward Island and Nova Scotia. The heat wave of the 15th to 18th established new extreme records in many localities, particularly in New Brunswick, where maximum temperatures exceeded 100 degrees.

Newfoundland had temperatures of one to five degrees above the average with the exception of the southwestern portion where a slight deficiency was reported. Along Hudson Strait and along the west coast of Hudson Bay excesses of one degree were recorded.

PRECIPITATION

Rainfall throughout British Columbia was generally below normal by ten to sixty per cent. with the exception of the southeastern coast of Vancouver Island where it was normal to fifty per cent. above normal and in the upper Fraser and Thomson River valleys where there were excesses of ten per cent. and twenty-five per cent. respectively.

In Alberta the precipitation was normal to twice the normal amount in the Peace and Athabaska valleys with a local extension of moderately heavy rains southward into the Edmonton-Camrose region. In the rest of the province the rainfall was generally well below normal, the deficiency averaging about fifty per cent.

Western Saskatchewan had deficiencies of thirty to eighty per cent. generally. That part of the province east of Battleford, Biggar and Swift Current had excesses of ten to forty-five per cent. generally with the exception of the region about Moose Jaw, Regina and Qu'Appelle and northward to Quill Lake, where two to three times the normal amount occurred.

Throughout Manitoba the precipitation was well above normal. At some points two or three times the normal rainfall occurred.

In the Kenora and Thunder Bay districts, as well as in the northern part of Algoma, the rainfall was normal to sixty-five per cent. above normal with some local exceptions. In the southern part of Algoma and throughout the Sudbury, Nipissing and Temiskaming districts there were deficiencies of ten to sixty per cent. In southern Ontario the August rainfall was generally fifteen to eighty per cent. below normal, with the exception of the Lake St. Clair, southern Lake Huron and western Lake Erie counties where the precipitation was above normal. In Essex county unusually heavy thunderstorms about the 2nd and 6th raised the total to more than twice the normal amount for August.

Along the upper and middle St. Lawrence and lower Ottawa River valleys there were excesses of ten to one hundred per cent. but elsewhere in Quebec the precipitation was ten to sixty per cent. below normal.

Precipitation was scanty in New Brunswick for the most part, with deficiencies of five to sixty-five per cent. Locally in the Chaleur Bay district there was a large excess. In Prince Edward Island there was about twice the normal amount of rainfall while in Nova Scotia there were excesses of five to seventy-five per cent. and about thirty-five per cent. generally.

The rainfall in Newfoundland was reported to be normal to fifteen per cent. in excess of normal along the southeast coast and fifty to seventy-five per cent. in excess on the west and northeast coast.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month.
